

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

14. Reduce $\frac{45}{8}$ to lowest terms.
15. 18 hours is what part of a day?
16. Reduce $\frac{1}{2}\frac{3}{4}$ to lowest terms.

ADDITION OF MIXED NUMBERS.

459. Add $12\frac{1}{2}$, $6\frac{2}{3}$, $8\frac{1}{4}$, $15\frac{5}{8}$, $\frac{3}{8}$.

In the fractions $\frac{1}{2}$, $\frac{2}{3}$, $\frac{1}{4}$, $\frac{5}{8}$, $\frac{3}{8}$, the numbers above the line, 1, 2, 1, 5, 3, are called *numerators*; the numbers below the line, 2, 3, 4, 6, 8, are called *denominators*.

To add fractions, they must have the same denominator. An inspection of the denominators, 2, 3, 4, 6, 8, shows that 48 or 24 will contain each without remainder. 24, which is the smallest number that will contain all, is called the *least common denominator*.

	24	
$12\frac{1}{2}$	12	
$6\frac{2}{3}$	16	
$8\frac{1}{4}$	6	
$15\frac{5}{8}$	20	
$\frac{3}{8}$	9	
<hr/> $43\frac{5}{8}$	<hr/>	$\frac{5}{2}\frac{3}{4} = 2\frac{15}{4} = 2\frac{5}{8}$. Ans. $43\frac{5}{8}$.

Instead of writing the common denominator 24, with each fraction, we may place it above, and write only the new numerators. $\frac{1}{2} = \frac{12}{24}$, $\frac{2}{3} = \frac{16}{24}$, $\frac{1}{4} = \frac{6}{24}$, etc. Write 12, 16, 6, 20, 9. The sum of these fractions is $\frac{55}{8} = 2\frac{15}{8} = 2\frac{5}{8}$. $\frac{5}{8}$ is placed under the fractions to be added, 2 is carried to the whole numbers, making 43.

NOTE. — The fractional parts of answers should be reduced to *lowest terms*.

460. Slate Exercises.

Add:

1. $23\frac{1}{2}$	2. $73\frac{1}{4}$	3. $93\frac{3}{8}$	4. $11\frac{7}{8}$	5. $18\frac{1}{8}$

GREATEST COMMON DIVISOR.

586. A common factor of two or more numbers is a number that will divide each of them without remainder.

The largest number that is a factor of two or more numbers is called the *greatest common divisor*.

587. Sight Exercises.

Find the greatest common divisor of:

- | | |
|--------------|---------------|
| 1. 27 and 48 | 6. 34 and 51 |
| 2. 25 and 35 | 7. 32 and 48 |
| 3. 36 and 54 | 8. 45 and 75 |

- | | | |
|----------------------|----------------------|-----------------------|
| 1. $\frac{144}{168}$ | 5. $\frac{275}{850}$ | 9. $\frac{512}{640}$ |
| 2. $\frac{275}{300}$ | 6. $\frac{28}{112}$ | 10. $\frac{224}{482}$ |

LOWEST TERMS.

589. How can you tell that a number is divisible by 2? By 5?

A number is divisible by 3 when the sum of its digits (figures) is divisible by 3; it is divisible by 9, when the sum of its digits is divisible by 9.

A number is divisible by 4, when the number expressed by its last two figures is divisible by 4.

When is a number divisible by 25?

590. A fraction is reduced to lowest terms by dividing the numerator and the denominator by their greatest common divisor.

591. Reduce to its lowest terms $\frac{169}{1001}$.

In this example, it is not easy to ascertain by inspection any number that will divide both terms. In such cases, the greatest common divisor is found by dividing the denominator by the numerator. The remainder is divided into the numerator, and each subsequent remainder is divided into the corresponding divisor until there is no longer a remainder. This last divisor is the *greatest common divisor* of the two numbers.

$$\begin{array}{r}
 5 \\
 169 \overline{) 1001} \quad 1 \\
 \underline{156} 169 \\
 13 \overline{) 156} \\
 \underline{12}
 \end{array}$$

13 is the greatest common divisor.

$$\frac{169 \div 13}{1,001 \div 13} = \frac{13}{77} \text{ lowest terms.}$$

592. In reducing fractions to lowest terms, the above method of finding the greatest common divisor should not be resorted to if it is possible to get along without it.

593. Reduce to lowest terms :

1. $\frac{123}{400}$

A look at both terms shows that 3 is a common factor. This reduces the fraction to $\frac{41}{100}$. 41 is a prime number, and is not a factor of 100, so that $\frac{41}{100}$ cannot be reduced to lower terms.

2. $\frac{432}{631}$

$$4 + 3 + 2 = 9; \quad 6 + 2 + 1 = 9$$

Since the sum of the digits of each term is divisible by 9, this number is a common factor, and reduces the fraction to $\frac{48}{70}$, etc.

3. $\frac{420}{785}$

5 is clearly a common factor, etc.

4. $\frac{42}{88}$

8. $\frac{217}{248}$

12. $\frac{51}{88}$

5. $\frac{111}{222}$

9. $\frac{78}{221}$

13. $\frac{119}{187}$

6. $\frac{42}{91}$

10. $\frac{68}{158}$

14. $\frac{115}{161}$

7. $\frac{52}{88}$

11. $\frac{77}{182}$

15. $\frac{216}{248}$

LEAST COMMON MULTIPLE.

594. Sight Exercises.

Give the least common multiple of:

- | | |
|------------------|-----------------------|
| 1. 16 and 24 | 6. 2, 3, 5, 9, 10 |
| 2. 12 and 15 | 7. 2, 3, 5, 6, 9, 10 |

| 4. 4, 12, 16 | 9. 2, 7, 14, 3, 9 |

595. Slate Exercises.

Add $14\frac{1}{3}$, $73\frac{2}{3}$, $6\frac{1}{4}$, $\frac{9}{14}$, $23\frac{1}{4}$, $101\frac{3}{14}$, $58\frac{1}{2}$, $9\frac{7}{12}$.

Here we have to find the least common multiple of 3, 9, 7, 14, 6, 14, 2, 12.

Rejecting 3, 6, 2 because they are factors of 12; 7, a factor of 14; and one 14, we have to find the least common multiple of

9 14 12

Divide these numbers by a prime number that is exactly contained in any two of them, bringing down the numbers that are not multiples of the divisor.

2		9	14	12
3		9	7	6
		3	7	2

Taking 2 as a divisor, bring down 9, and write quotients 7 and 6.

3 being a factor of two of the three numbers, 9, 7, 6, is taken as the next divisor. 3 is written as a quotient, 7 is brought down, 2 is a quotient.

As there is no factor common to any two of the numbers, 3, 7, 2, we find the least common multiple by multiplying together the two divisors and these three numbers.

$$2 \times 3 \times 3 \times 7 \times 2 = 252 \text{ L. C. M.}$$

617. Slate Problems.

1. If 17 horses cost \$4,387, what will I pay for 51 at the same rate?

618. Problems consisting of multiplication and division can be sometimes shortened by indicating the operations, and then canceling. To solve the above, we indicate the cost of one horse, $\frac{\$4387}{17}$, and of 51 horses,

$$\frac{4387}{17} \times 51 \text{ or } \frac{4387 \times \overset{3}{\cancel{51}}}{\cancel{17}}$$

Since 17 is contained in 51 three times, we cancel both numbers by drawing a line through them, and we write a 3 above the 51. The answer is $\$4,387 \times 3 = \$13,161$.

2. If 15 eggs cost 25 cents, what will 10 dozen cost?

$$\frac{25 \times 10 \times 12}{15}$$

We indicate price of one egg by dividing by 15. Multiplying this by 10 times 12, we get the price of 10 dozen.

In this case, 15 is not contained in any number above the line. We divide 15 and 10 by 5, canceling them and writing quotients 3 and 2 alongside. 3 is contained in 12 4 times; so we cancel 3 and 12. Our answer now is 25 cents $\times 4 \times 2 = 200$ cents, or \$2.

$$\begin{array}{r} 25 \times \overset{2}{\cancel{10}} \times \overset{4}{\cancel{12}} \\ \hline 15 \\ \hline 2 \end{array}$$

DIVISION OF DECIMALS.

659. Divide 42 by 2.1.

Changing the decimal fraction in the divisor to a common fraction, we have

$$42 \div 2\frac{1}{10} = \frac{42}{1} \div \frac{21}{10} = \frac{42}{1} \times \frac{10}{21} = \frac{420}{21}.$$

$$42 \div 2.1 = 420 \div 21.$$

660. When we change the divisor 2.1 to 21, we have multiplied it by 10, and the same change must be made in the dividend.

661. In the following examples, make each divisor a whole number by removing the decimal point, and make a corresponding change in the dividend.

662. Divide :

21. $80 \div 2.5$

30. $72 \div .5$

22. $8 \div 2.5$

31. $960 \div .03$

23. $840 \div 1.2$

32. $.847 \div .007$

24. $36 \div \frac{2}{10}$

33. $27 \div .002$

25. $36 \div .9$

34. $10 \div .8$

26. $12.6 \div 6.3$

35. $1.263 \div .03$

27. $48 \div 15$

36. $196.3 \div .013$

28. $18.36 \div .6$

37. $19.63 \div .013$

29. $50 \div .25$

38. $1.963 \div .013$

663. Remove the decimal point in the divisor three places to the right, and make a corresponding change in the dividend, adding two ciphers.

To show where the decimal point originally belonged, it may be enclosed in a small circle, instead of being erased.

When the divisor is thus made a whole number, the decimal point in the quotient will be placed under (or over) the new decimal point in the dividend.

How many square yards in a room 18 feet long, 15 feet wide?

681. Slate Exercises.

Calculate the number of square yards in the following. First reduce each side to yards.

- | | |
|----------------------|----------------------|
| 1. 18 yd. by 21 yd. | 6. 33 ft. by 36 yd. |
| 2. 54 ft. by 63 ft. | 7. 27 ft. by 96 ft. |
| 3. 72 in. by 108 in. | 8. 54 ft. by 72 in. |
| 4. 19 yd. by 47 yd. | 9. 48 ft. by 45 ft. |

$$22 \text{ ft. } 6 \text{ in.} = 22\frac{1}{2} \text{ ft.} = \frac{22\frac{1}{2}}{3} \text{ yd.} = \frac{45}{6} \text{ yd.}$$

$$\text{Area} = \frac{55}{9} \times \frac{45}{6} \text{ sq. yd.} \quad \text{Canceling, } \frac{55 \times \overset{5}{\cancel{45}}}{\cancel{9} \times 6} = \frac{275}{6} = 45\frac{5}{6} \text{ sq. yd.}$$

12. How many square yards in a room 13 ft. 1 in. long, 27 ft. wide?

$$13 \text{ ft. } 1 \text{ in.} = 157 \text{ in.} = \frac{157}{36} \text{ yd.} \quad 27 \text{ ft.} = 9 \text{ yd.}$$

$$\text{Area} = \left(\frac{157}{36} \times 9 \right) \text{ sq. yd.} \quad \frac{157 \times \cancel{9}}{\cancel{36}} = \frac{157}{4} = 39\frac{1}{4} \text{ sq. yd.}$$

THE NATURAL SYSTEM OF

Vertical Writing

By A. F. NEWLANDS and R. K. ROW.

Six Books. Per doz., 75 cts.

Some of the special merits of our system are : —

Practicability. It is the outgrowth of nearly five years' experience in vertical writing with thousands of pupils of all school ages. The authors of other series have not had this experience.

Strength. The books are in marked contrast to most of the systems recently published, which are efforts to adapt the sloping hand to the upright position.

Harmony. This system has been carefully worked out with a central idea as to form and movement.

Ease. Our round vertical script can be easily written. Engravers often produce graceful forms and combinations, but such as one cannot reproduce easily with the pen. Every form and combination in our system has been thoroughly tested to avoid such difficulties.

Rapidity. Many of the letter-forms at first considered because they were artistic and graceful, after having been put to the test were discarded because they did not permit rapid execution.

Educative. The copies in the primary numbers are large and are illustrated with tasty outline drawings, stimulating interest in the writing and correlating reading, number, nature study, and spelling with the special writing lesson. So far as practicable the correlation of studies has been carried throughout the series. The size of the letter forms is gradually reduced in the first four numbers.

Economy. Such facilities have been secured for their manufacture, that books of the very best quality will be furnished at the very lowest prices.

Descriptive circular and sample copies sent on request.
